SINGLETRAILER

# SINGLETRAILER

## Maximum safety and comfort

The Singletrailer is the ideal trailer for all bikers who want to enjoy the mountains together with their families. With the Singletrailer real mountain bike tours are possible, even across the roughest terrain: The child sits, gently sprung and cushioned (spring travel 200 mm), in a chassis produced

from extra-light but highly durable CrMo steel with a roll bar. The five-point seat belt ensures additional safety. The Singletrailer is just 45 cm wide – and therefore narrower than your mountain bike – and weighs only 9.5 kg.

«The innovative single tracked trailer is basically the only alternative for those parents who want to go mountain biking or touring with their kids. The riding dynamics of the Singletrailer is outstanding and vastly superior of conventional trailers. Instead of tilting to the left in fast right turns (and vice versa), it easily tilts into the curve with the front bicycle.»

Fahrrad News 3/15

«Very impressive trailer, works extremely well – the kids loved it :-) »

«I've used trailer bikes with seat post pivots that have behaved quite strangely, but the Singletrailer is very predictable – I think the weight distribution helps, and the actual pivot is really good, there's no slop in it at all. The suspension makes a big difference too. The big stand is excellent, makes loading and unloading very easy.»

CTC Cycle Magazine, UK 7/13

«Those who believe the birth of his child would be the end of regular mountain bike tours, is fortunately wrong. Thanks to the all-terrain trailer from tout terrain it is possible to allow the kids to also enjoy the single trail experience. With 200 mm of travel the trailer provides a neat reserve to master even challenging terrain well.»

Enduro MTB Magazin 11/13

For children from 3 months (with baby carrier) to approx. 5 years (max. 25 kg)

Stable and crash-proof frame with roll bar from CrMo tube

Three different cover options from high quality Cordura

High quality, comfortable seat from robust Cordura filled with PU foam prevents the child from becoming chilly or overheating

Compatible with 29" bikes

High quality CNC-produced joint with ball-bearing for connection to towing bike

Five-point safety belt with padding

Simple handling due to the low overall weight of just 9.5 kg

Spring travel 160 or 200 mm (adjustable)

Lateral forces have hardly any effect on your child in the corners thanks to corner banking

Extremely low rolling resistance due to single tracked design

**tout** terrain

Compact stowable

Bags

Mudguard

iSURO pillow
